

Your surveys supervision

The screenshot displays the Converso Supervisor interface. At the top left is a data table with columns for 'Site', 'Date', 'Statut', and 'Progrès'. To the right is a bar chart titled 'Âge (QC) / Sexe (QA)' showing the distribution of interviews by age group and gender. Below these are three smaller charts: 'Statut des contacts' (a pie chart showing contact status), 'Interviews réalisées par Jour' (a line graph showing daily interview counts), and 'Interviews réalisées (aujourd'hui, par heure)' (a line graph showing hourly interview counts).

CONVERSO SUPERVISER

- ✓ **GRAPHIC AND RSS FLOWS SURVEY FOLLOW-UP**

Converso Supervisor is the quotas and fieldwork supervision and management tool, common to all Converso datas collection channels (CATI, CAPI, CAWI, Mobile).

Drive your survey course
Access to a global graphic dashboard to control the status of your surveys and follow up objectives (survey in progress, objective overview, start and end date, number of interviews completed and still to be carried out,...). Benefit from real time vision thanks to continuous data updating.

Sample use optimization
Add new entries during fieldwork. Double entries will be automatically deleted.

Win efficiency
Manage interviewers on different sites and control their calls performances.

Converso Enterprise takes advantage of the entire power of your systems ; Unix, Linux, Microsoft, Mac OS,... supports all the relational databases of the market; SQL Server, Oracle, MySQL,...
